Coaching display guide

Start

From the Classic compass, tap the centre, then Coaching. Choose Progress, Stuck, Unclear, Explore, AI or Team. An opening question is optional: tap the Coaching compass centre, then Another opener.

Questions and tries

Paths changes context. Another cycles through questions or experiments in the current path. Try (optional) switches to experiments; Question switches back. Each path remembers its question and experiment separately.

Guide me

Guide me opens guidance for the current entry. Back returns to where you came from. For an opening card, use Options > Guide me. Guide also offers Release, Opening and Reminders.

Finishing and reminders

Release opens the closing prompts. Options > Reminders opens the listening reminders. Both screens offer Back, Release, Opening and Next. Next cycles within that group; Opening returns to the Coaching compass. These screens have no Guide me.

Options

Tap the compass centre, or Options on an opening card. The menu has Back, Another opener, Guide me, Release, Classic, Instant ON/OFF, Reminders and Sound ON/OFF. Classic changes mode; Instant skips the opening animation but not its reading hold; Sound controls the optional cue.

Scrolling and motion

Scroll when Scroll for full text appears. S arms a temporary shake request; tapping S does not draw a card. Accepted shakes or flips draw an opener, not the next question. Coaching automatic-shake reliability remains unresolved; use the touch controls when needed.

About the entries

Each following page contains the unchanged screen text and, where available, its Guide me text. Page headings help you browse; they are not extra screen text. Version 31. Content remains DRAFT.

Opening 1

On screen

How's the project going?

Guide me

If useful, explore what's working well or what's been challenging. Neither is required.

Opening 2

On screen

Where are you with the project right now?

Guide me

Follow their words. They can choose any path, ask for direct help, or stop.

Opening 3

On screen

What's been the most interesting thing you've discovered?

Guide me

Follow their words. They can choose any path, ask for direct help, or stop.

Opening 4

On screen

What are you hoping to accomplish today?

Guide me

Follow their words. They can choose any path, ask for direct help, or stop.

Opening 5

On screen

What have you learned that surprised you?

Guide me

Follow their words. They can choose any path, ask for direct help, or stop.

Opening 6

On screen

How's the team feeling about the direction you're heading?

Guide me

Follow their words. They can choose any path, ask for direct help, or stop.

Progress · Question 1

On screen

What's working well?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked.

Progress · Question 2

On screen

What is working well that you would like to keep?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked.

Progress · Question 3

On screen

What's surprised you about your progress?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked.

Progress · Question 4

On screen

What would you like to build on next?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked.

Stuck · Question 1

On screen

What have you tried so far?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning.

Stuck · Question 2

On screen

What did you expect to happen, and what happened instead?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning.

Stuck · Question 3

On screen

What's been the hardest part to move past?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning.

Stuck · Question 4

On screen

What might you be assuming that hasn't been tested?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning.

Unclear · Question 1

On screen

What are you hoping to accomplish?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them.

Unclear · Question 2

On screen

What part of the problem is still unclear?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them.

Unclear · Question 3

On screen

Who would benefit from solving this, and how?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them.

Unclear · Question 4

On screen

What would you need to learn before deciding what to do?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them.

Exploring · Question 1

On screen

Which possibility would you like to explore?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice.

Exploring · Question 2

On screen

What different approaches have you considered?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice.

Exploring · Question 3

On screen

What might you learn by trying something different?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice.

Exploring · Question 4

On screen

What would help you choose between these ideas?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice.

AI Results · Question 1

On screen

How well does the output fit what you need?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful?

AI Results · Question 2

On screen

How does the output compare with what you expected?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful?

AI Results · Question 3

On screen

What makes this example useful for what you want to do?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful?

AI Results · Question 4

On screen

What have you learned from the approaches you've already tried?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful?

Team · Question 1

On screen

How is working together going for you?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional.

Team · Question 2

On screen

Where do you see things differently?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional.

Team · Question 3

On screen

Are there perspectives we haven't heard yet?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional.

Team · Question 4

On screen

From your perspective, what matters most right now?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional.

Progress · Try 1

On screen

Would it help to try one successful approach in another example?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Progress · Try 2

On screen

Would it help to invite AI to challenge an assumption, then check any consequential claim against actual evidence?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Progress · Try 3

On screen

Would it help to identify one observation that could increase or decrease your confidence in the result?

Guide me

Make room for useful progress. Do not manufacture a problem or assume why something worked. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Stuck · Try 1

On screen

Would a small, safe test help you learn more?

Guide me

Test one reversible step, if wanted: compare expected and actual results. If mistakes could harm people or real work, use a copy or mock-up; stop before those effects. One result informs only that step. Give requested direct help; adapt, decline or continue human-only. AI/tools may check observations; AI self-critique is not proof. Match evidence to consequences, not exhaustive human re-auditing.

Stuck · Try 2

On screen

Would it help to explore contrasting approaches, with or without AI, before choosing a small step?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Stuck · Try 3

On screen

Would it help to test one assumption with a quick, reversible example?

Guide me

Understand expected and actual results before proposing a fix. Requested direct assistance is welcome; do not withhold it to prolong questioning. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Unclear · Try 1

On screen

Would it help to write a one-sentence problem statement?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Unclear · Try 2

On screen

Would it help to identify missing information or ambiguous requirements, with AI if useful?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Unclear · Try 3

On screen

Would it help to compare two possible definitions of success without choosing a solution yet?

Guide me

Let them define success and what is uncertain. Do not pick a solution for them. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Exploring · Try 1

On screen

Would it help to sketch a human-only approach?

Guide me

Sketch, say or draw one feasible human-only step; that is a complete choice. Only if useful, compare realistic human-only, AI-assisted and hybrid routes: preparation, work, checking, correction, integration and learning and capability. No winner or AI trial is required. Adapt, decline or request direct help. AI/tools may check feasibility against sources or observations; AI self-critique is not proof. Match evidence to consequences, not exhaustive human re-auditing.

Exploring · Try 2

On screen

Would it help to compare two ideas in a small, safe test?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Exploring · Try 3

On screen

Would it help to explore an argument against the current favorite, without needing to change your mind?

Guide me

Explore differences without forcing a winner. Keeping a human-only approach is a complete choice. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

AI Results · Try 1

On screen

Would it help to ask AI to critique the output against your goal, then test consequential claims using sources, observations or executable checks?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful? This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

AI Results · Try 2

On screen

Would it help to check one claim together?

Guide me

Compare expectations and output; consider goal, context, data, tool limits or choosing AI. Only if disappointing, ask what felt least useful. If wanted, check one consequential claim against original sources, executed checks or observations; AI/tools can help. Missing evidence leaves uncertainty. Adapt, decline, request direct help or continue human-only. AI self-critique is not proof. Match evidence to consequences, not exhaustive human re-auditing.

AI Results · Try 3

On screen

Would it help to choose a few useful criteria and compare outputs against them?

Guide me

Understand expected versus actual results before changing prompts. The goal, context, data, tool limits or choice to use AI may matter. Only if they report disappointing output, you could ask: What part felt least useful? This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Team · Try 1

On screen

Would a quiet minute before sharing help?

Guide me

Listen for differences; do not diagnose silence or infer agreement from silence or sharing. Quiet thinking, writing or drawing is optional; offer spoken or paired alternatives. Passing needs no explanation. Sharing is voluntary; nothing needs collecting. Adapt, decline, request direct help or continue human-only. If checking a shared claim, AI/tools may use sources or observations; AI self-critique is not proof. Match evidence to consequences, not exhaustive human re-auditing.

Team · Try 2

On screen

Would it help to privately write, draw or discuss an uncertainty in pairs, then optionally share differences?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Team · Try 3

On screen

Would it help to look for a small experiment people understand, leaving disagreements visible rather than assuming agreement?

Guide me

Differences can remain visible. Do not invent agreement or diagnose silence. Offer passing, writing, drawing, spoken or paired alternatives; sharing is optional. This is optional: adapt, decline, request direct help, or choose another next step. AI self-critique is not proof; use evidence suited to the consequence, not exhaustive human auditing.

Closing 1

On screen

What's your next step?

Closing 2

On screen

What would you like to try first?

Closing 3

On screen

How will you know whether that helped?

Reminder 1

On screen

Stay curious. Listen before solving. Follow their words, not your assumptions.

Reminder 2

On screen

Silence can be thinking time; do not diagnose it. Offer direct assistance when requested.

Reminder 3

On screen

Passing, writing, drawing, speaking or pairs are legitimate choices. Let people own their next step.

Reminder 4

On screen

Invite a brief round without interruptions. State that passing is welcome and private or paired contributions are alternatives. Reflect back ideas without attaching judgments to who spoke or stayed quiet.
